Clyde Puffer

Members might be interested in the preliminary construction details of our Puffer . Shown is the steel laser cut keel with frames slotted in position . I have to make a jig to hold the whole lot in place while i weld it up. The boiler i made earlier and Gordon already has a beautiful compound engine ready to go. He tested the boiler under steam recently to 80lb and all is well. Will post more pictures as and when. Les Breame

3rd Oct 2018

welding

Started welding frames to keel.

4th Oct 2018

welding

all frames welded to keel.
