Chris Craft Constellation

Well I haven't posted for a while & I haven't gotten sick either It was the dam windows that have taken me so long .The upper deck curved window was a pain as I tried & tried to make a curved windshield it's not perfect . And I have been also waiting on a part for the servo arm I found this new type on Bangood I'm not a spoke person for them because it took about a month to get them I always have a hard time with Dupro servo connectors so I'll try them see photo . Next is the rudder servo installation & I also made a stand for her also I may be calling it Corona Extra 19 . Part is called (M2 Fast Metal Positioning Rod Regulator Adjuster For RC Boat 5 PCS)
