Jurmo Class watercat landing craft

I started this quite a while ago, ideas came from model boats mag. A fun boat for my grandson. With no plans had to scale , etc from photographs. Build was using plywood from an old wardrobe (this is built out of the best of birch ply of various thicknesses. I fitted twin prop and rudders (not shown) however changed direction after viewing a different configuration. More info later

Props removed

i had the props when i saw a build using jet drives. Wow , more like the real thing. Found them on ebay from china at a good price. removed the props and rudders, patched up the holes and fitted the jet drives using the motors i was going to use for the project. Had a few problems with leaks however now fixed. Bath test looks promising. Paint job as per Malaysian Police. A bit different.

Radar and lights

Using bits from a cheap self driven hoover bought by a friend from Wish. Total useless as a hoover but bits great for radar , flashing leds and battery.
